When groundwater does get polluted (e.g., by polluting solutes such as leachate from landfills carried down with the water from the ground surface, or by intrusion of groundwater of inferior quality into an aquifer), the restoration of quality and the removal of pollutants by mixing with and leaching by clean groundwater is a very slow hence ...

The notion that groundwater pollution initiates as transport in the unsaturated zone, and the fact that common vadose zone methodologies have only limited ability to provide real-time alerts for pollution processes should push the research community to issue a clarion call to develop monitoring technologies for the unsaturated zone.
